Frontend developer

Hi! I'm João and I'm a frontend developer based in Porto, Portugal. I'm submitting this application for the frontend developer position.

I've worked in all size projects from single page applications to big platforms, using a broad range of technologies, different types of methodologies and team compositions.

I'm currently working on a startup company where my main responsibilities are planning and developing the full stack of the platform. Part of my job is to also serve as a bridge between the business, content/SEO, design and engineering teams, making sure everyone is on the same page and clearly translate business requirements to actionable design and development items.

I'm specially interested in perfecting the user interface aspect of websites/ applications, where I take special consideration to the user experience and accessibility in the smallest details to create the best digital experience possible.

I'm currently looking for a new challenge where I can make the most out of my skillset.

Preferred technologies

Frontend (UI)	Frontend (other)	Testing	CI/CD	Platform
React Next.js Styled Components Styled System	Lerna Storybook Webpack GraphQL (apollo client) Figma Zeplin (sketch)	Husky (pre-commit) Jest React Testing Library TestCafe Puppeteer Cypress Storybook Chromatic	Jenkins GitLab CI/CD CircleCI	GCP AWS
